

Flexible probes *DUAL-V* with 2 cameras 0° & 90°

Our Dual-V video probes represent a huge setp in remote visual inspection. Delivered with a strong LED illumination, a 400.000 pixels resolution, they are equipped with 2 CMOS Sensors mounted for the first one in front forward vision and for the second one at 90° for side vision. Both Objectives offer the same high resolution for full screen inspection.

A button located at the basis of the probe allows to switch from one direction of vision to the other without having to change the videoscope probe or adding a mirror tip. Thus offering a unprecedented comfort of inspection and gain of time during inspection.

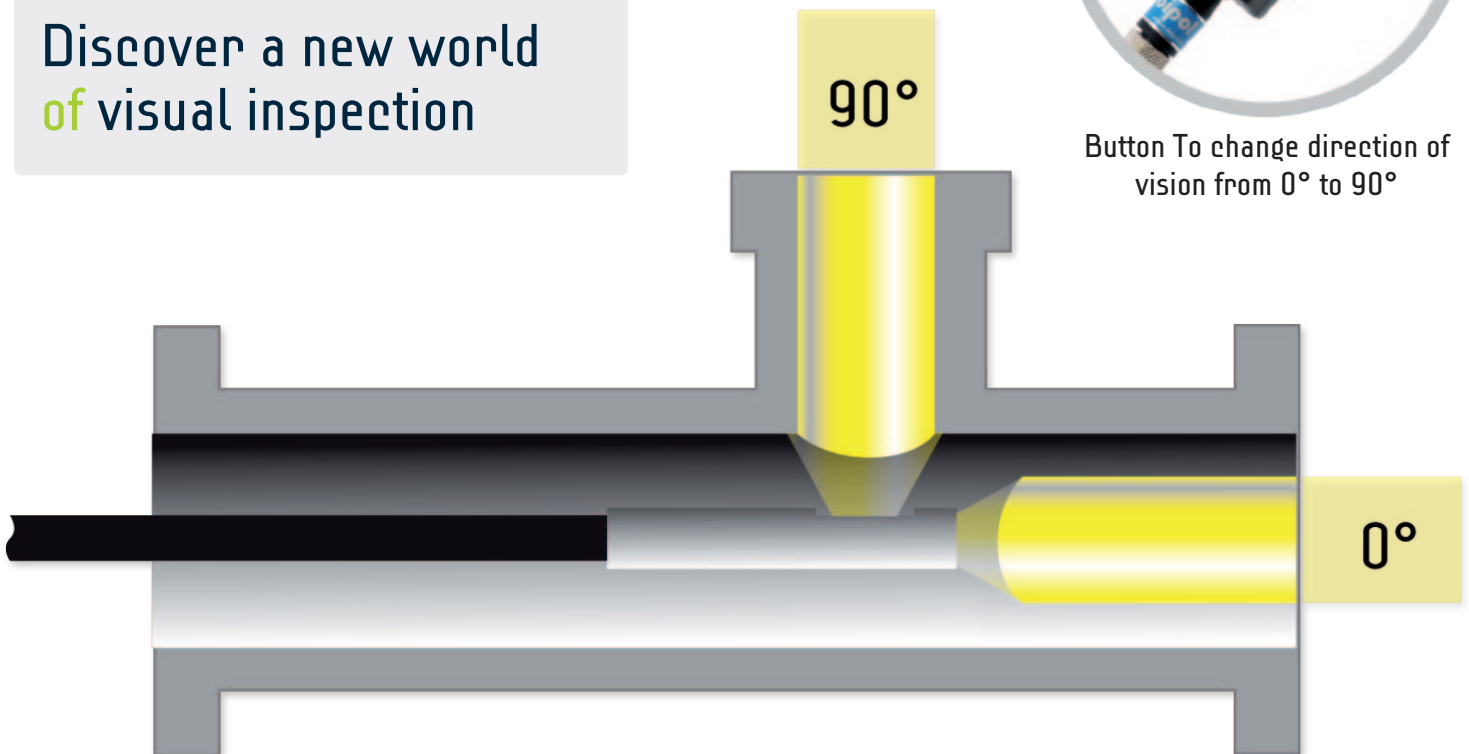

You will be able to inspect all sorts of parts, pipes ro hard to reach areas with either a front direct vision or a lateral 90° vision.

The Dual-V probes are compatible with all the videoscopes of our Bscope line

Button To change direction of vision from 0° to 90°
