

NEXUS 7700G2

AUTOMATIC HARDNESS TESTER

UNIVERSAL | ROCKWELL, VICKERS, KNOOP & BRINELL

NEXUS 7700G2

The icon of Universal hardness testing!

Revival of the NEXUS 7700G2 as the world's most popular Universal Hardness Testing machine. This next generation of the originally 1960's developed matt screen universal hardness tester with swivel system for indenters and objectives offers significant new features and benefits for its enthusiastic users.

There is a new high resolution 11 megapixels camera on board of the 7700G2 supporting a brand new, infinite type optical system. Image quality - far superior to any similar machine on the market.

Unique is the Quick Change adapter for objectives. It now takes less than 2 seconds to change the magnification objective to a larger or lower magnification at choice.

The new software platform with larger screen provides simple operation and a low learning curve.

IMPRESSIONS™ 4 also supports the use of motorized stages on the 7700G2.

Economic high-end hardness testing according to ASTM, ISO, JIS and GB standards.

HARDNESS SCALES

VICKERS
+ HVD (HVT) 500gf - 150kgf

KNOOP 500gf - 5kgf

BRINELL
+ HBD (HBT) with AI 1kgf - 250kgf

ROCKWELL 3kgf - 150kgf

CONVENIENT TEST FORCE RANGE, SUPPORTING ALL COMMON SCALES!

NEXUS 7700G2

250kgf

HIGHLIGHTS

- 1 Load cell, Closed loop, force feedback, load application system.
- 2 Infinite color corrected optical system with autofocus (AF)
- 3 11 Megapixels, 4K+ Full HD camera system, with zoom and autofocus
- 4 22" industrial HD touchscreen, height adjustable
- 5 Two position swivel system, indenter/objective
- 6 Quick change objective adapter, change objectives in just a few seconds
- 7 Special Brinell objective BRI-LED and ringlights available
- 8 Workstage illumination and process indicators
- 9 Precision Z-axis displacement by ergonomic handwheel
- 10 Integrated (or external) high performance system controller i7 processor
- 11 Optional adjustable workpiece clamp
- 12 Manual and motorized CNC X-Y stages and/or anvils at choice
- 13 Workpiece accommodation: 340 mm (H) x 205 mm (D)

QUICK CHANGE SYSTEM

OPTICAL SYSTEM

The NEXUS 7700G2 new infinite optical system provides ultra sharp magnifications, excellent sharpness/depth ratio and is color corrected. The new objectives are long working distance, offering more positioning comfort to the user.

SET OF QUICK CHANGE OBJECTIVES

Most production oriented hardness testing machines nowadays are supplied with a multi position turret. The turret that often can hold up to 9 different tools is a handy feature on the hardness tester but comes with a certain investment.

Commonly, in test laboratories there is no real production and the tester just needs to be versatile, able to do a good number of scales. Often there is the need to change objectives and this was always a hassle on non-turret machines, as objective changes came with necessary optical adjustments.

This is now a thing of the past as the NEXUS 7700G2 has been updated with a quick change lens/objective adapter on the swivel system.

In just a few seconds an objective can be changed.

All objective magnifications can be supplied with integrated ringlights or with a BRI-LED objective. No corrections or adjustments need to be made, no wires to be connected. Click out, click in.

The new quick change optical adapter provides efficient workflow as economic alternative to turrets.

BRI-LED BRINELL EVALUATION OBJECTIVE

BRI-LED quick change objective modules improve the analysis of Brinell indentations. Commercially available objectives usually give poor performance particularly on soft Brinell indentations and therefore cause inaccurate diameter readings and incorrect results.

BRI-LED objectives provide better illumination and contrast and therefore better repeatability on measurements, regardless of material type and hardness value.

OBJECTIVES SET

The purpose of software is to control complexity...

For the more advanced users, for whom the standard applications would not be sufficient, IMPRESSIONS™ 4 has an unmatched level of optional “apps” that can be installed as plugins, later, at any moment. During the purchase of your tester, decide on what you need at that moment. Widen your options at any moment by a simple e-mail and a few mouse clicks, to install optional functionality. As easy or simpler than installing an app on your mobile phone.

POWERED BY IMPRESSIONS v4

Next gen workflow & tester control...

Just buy a software release ticket, and your tester has added functionality, regardless where it is located. A revolutionary system taking care of all your needs.

In this way we keep the learning curve, the process to work efficiently with our software limited to the level of “need to have” and “need to know”. The proportion of installed and activated software never needs to be higher than your requirements.

On the higher end, IMPRESSIONS 4 connects flawlessly with quality control systems such as QDAS, exports files in CVS, XML or other formats and if your requirement is not standard, our team of engineers will efficiently find ways to handle your data properly. Bespoke solutions such as connectivity to robotic systems are standard solutions for INNOVATEST™.

Unique to IMPRESSIONS™ 4 is a choice for screen size and position. Whether you wish your interface to be in portrait mode or landscape, all functionality is supported in both positions. For table top solutions like testers in laboratories, users often opt for landscape screen(s).

On the shopfloor, the large landscape screens are often an unwanted component either requiring a table top or machine mounted bracket taking a lot of space and cables to deal with. IMPRESSIONS 4 leaves you the option to go for landscape or for portrait mode on a large selection of our machines.

TIME REDUCING SOFTWARE SOLUTIONS...

1 PATTERN EDITOR

The IMPRESSIONS™ pattern editor allows the user to create any number of test patterns with a large number of variable settings. Create test patterns with great precision and freedom. Verify the settings in the preview mode. Drag & drop patterns from one test sample to another sample. Live vision technique over zoom overview camera, no image stitching required.

Combine different patterns and even different test forces in one program, and run them fully automatically. All test points can be identified individually or to customer specifications. The label is shown in the test result list and in the test results overview and in the results print out. An important function for sample analyses at the end of a test and in the future for review of previous tests.

3 WELD INSPECTION (ISO 9015)

This especially developed tool enables you to conduct hardness testing on welded parts or segments according to ISO standard. Setting up the pattern according to the requirements becomes "easy-to-do", due to pre-set test points in the different zones of the weld and automatic correlation between test points. The system will run a fully automatic test procedure and display and record the results accordingly.

The Report Generator is enhanced with reporting features for this application.

2 CHD, SHD, NHD

How do you increase throughput in your lab? Make the most common testing design as easy to set up as possible to perform automatically and still adhere to the applicable standards. CHD/SHD/NHD testing can be started directly from the surface view or from the overview. Additional core points of hardness can be defined separately for NHD measurements.

The distances of test points are automatically set to a minimum distance, following the standard, to assure correct testing is conducted. Time saving test mode "complete all indentations – then evaluate" and "auto-stop" to complete test series as soon as the lower hardness limit has been reached. Report Generator is enhanced with reporting features for this application.

4 HARDNESS OF SCREW THREAD DECARBONIZED ZONE (ISO898-1)

A specialized software tool of IMPRESSIONS™ allows you to set up and conduct fully automatic testing as per ISO898-1 for screw thread measurement of (de)-carbonized part.

The Report Generator is enhanced with reporting features for this application.

5 EDGE DETECTION

Technology that automatically or at a mouse click recognizes the edge of your sample. This helps to determine and fix the desired starting position for CHD or other pattern testing jobs.

7 2D HARDNESS CHART

The application „Plane hardness chart“, is also referred to as Color Mapping happens to be the perfect tool for securing the detail of the effective hardness distribution over the total sample cross section of heat treated samples. An important feature in material exploration, weld testing or in damage analysis.

6 AUTOMATIC CONTOUR SCANNING

This application scans the entire outline (or partial) area of a sample. The function can be used with an objective by using the overview zoom camera for high speed scanning. The system scans the entire outline defined and stores all relevant data in the test program.

8 3D HARDNESS CHART

In addition to 2D graphic diagrams, the system can also automatically generate 3D diagrams. 2D and 3D hardness charts are included in one application.

9 Kic CRACK MEASUREMENT

For those requiring more in depth knowledge on materials behavior, wishing to study material fracture and fatigue, crack growth can be predicted and measured by using the Kic application.

The software supports Kic crack detection under load with customized Kic result reporting. By way of one or both methods, Palmqvist or Median / Radial, fracture toughness is now a repeatable and reproducible test across multiple operators.

10 SNAPSHOT FUNCTION

This handy function in IMPRESSIONS™ allows you to make screen captures of the viewing area by way of objective view and/or Overview camera. It gives the opportunity to store such images with comments or to paste them into the report generator for further processing.

11 USER DEFINED PROGRAMS

For repeating jobs, IMPRESSIONS™ utilizes the option of setting up and storing custom test programs. For each task, a "job" can be created. All application specific parameters, such as hardness scale, force, dwell-time, pattern, conversion and the report template are stored in the same program.

12 REPORT GENERATOR

Imagine having a report created for you that includes: Your company name, address, contact information, labeled results related to patterns or sequential, pictures of your optical measurements, stitched images, notes section for each result or pictures, rendition of the pattern performed, overview picture of your pattern on your sample, full statistics, summary of your results, go no-go results, Pass or fail...

All this information or having the ability to only have what you need reported, we call this our Report Configurator. You decide how much or how little you report by PDF or laser printer. We even keep it simple by choosing export to CSV file, to a thumb drive or network file location. Data management at its best!

MONITORING

Our world is going through processes that have influence on climate and environment. More often we see extreme heat, extreme cold and periods of extreme rain. To assure that such disturbances of nature do not coincidentally effect your measuring or testing results, we have prepared our machines to climate change and forces of nature.

13 VIBRATION & EARTH QUAKE MONITORING

The integrated high precision accelerometer electronics continuously monitor your tester's stability environment. While the tester has vibration isolators (machine dampers) installation environment is often not ideal. Think of heavy traffic, loaded fork lift trucks, excentre presses or other equipment making shop floor installation a base of trouble.

For certain countries/area's in the world where light earthquakes are so common that they are hardly noticed, the vibration monitoring system will give a warning message and stop the hardness testing process to avoid incorrect readings.

14 TEMPERATURE & HUMIDITY MONITORING

Extreme high or low temperatures might not only effect the hardness readings of your machine (think of installation in extremely warm countries or nearby furnaces) extreme humidity might even damage the sensitive electronics.

IDENTIFICATION

- 15 The basic function of the barcode reader is to load data in to determined user fields. The BAR | QR code module of INNOVATEST connects the machine to a database or network environment loading samples and data.

Whether simply inserting header files (single or serial) or the complete integration of reading devices for the automatic selection of database templates, retrieving data from connected ERP or quality systems (optional) QR and barcode readers simplify complicated work procedures for the operator.

In the above application, a turbo part has been engraved with a QR code. Extra challenging was the fact that the QR code was engraved in a high polished part of the turbo shaft.

All data for the particular turbo part was fixed in the underlying QR code. The scanner loads all customer data in the hardness testing machine and assures that the testing outcome is included in the particular test report database, fully automatic.

METALLOSCOPE™

METALLOGRAPHY

SOFTWARE

The objectives on the 7700G2 make the hardness tester into an excellent highly automated metallographic microscope. Metallographic studies are of key importance in the manufacturing process of metals and steel, in the aerospace and automotive industry, in mechanical engineering, construction and in the manufacturing of a vast number of industrial and consumer products.

Microscopy is an indispensable feature of every metallographic lab, whether you investigate damages, develop novel alloy materials or perform quality control to ensure the purity of steel. The measurement of certain parameters such as volume fraction, coating thickness and grain size is specified in strict standards and norms.

Metallography is used to investigate metals from copper and titanium to iron, steel and alloys of every description. These investigations can now be performed quantitatively and reliably using the INNOVATEST Metalloscope™ 1 software module, running on most of our higher-end hardness testing machines*. *(features of Metalloscope™ 1 software depend on the particular tester model).

The microstructure of metals has a significant influence on properties such as strength and corrosion resistance. Therefore, a detailed investigation of the microstructure with the help of microscopy is central to metallographical disciplines as well as many industrial applications.

GRAIN SIZE

Grain size:

The grain size index can be calculated in various 1 or 2 dimensional way; using a 1-dimensional method (from the number of grain intercepts per mm) or a 2-dimensional method (from the number of grains per mm²). Line profile: 1-dimensional grain size index calculation by counting the number of grain intercepts on a line. Hexagonal grid: 2-dimensional grain size index calculation using a superimposed hexagonal grid or single grains calculation by counting the number of grains in a specific part of the image (blue box).

Hardness tester and metallurgical microscope.

Basic metals undergo specific treatment in order to prepare them for particular applications and to improve their characteristics, for example by adding alloying elements. In many cases, the microscopy investigation focusses on the correlation between the resulting microstructure and the material properties.

VOLUME FRACTION

Volume fraction:

Various methods integrated; the example shows a sample consisting of ferrite (black material) and austenite (white material). Pixel counter: calculation based on histogram-guided image thresholding. Two automatic thresholding algorithms in addition to manual thresholding. Grid counter calculation using a superimposed grid. Each grid point can be assigned to the black material or white material. Initial values (black or white) are assigned automatically, but can be toggled manually. Grid positions are calculated by defining the number of grid points or the grid spacing.

COATING THICKNESS

Coating thickness:

Calculate the thickness of a coating layer. This can be a single thickness or a mean thickness with standard deviation or a coating contour. Calculation using two parallel lines. The resulting coating thickness is the distance between these lines. Calipers can be rotated, automatic or manual. Coating contour: coating thickness calculation based on a number of measurement points. Contour edges are drawn semi-automatically and the number of measurement points can be selected by the user.

AUTOMATIC IMAGE EVALUATION

AUTO FOCUS

Fast & precise, observe how IMPRESSIONS™ finds focus from a large distance, as far as the travel of the Z-axis allows. Algorithms used for close distance autofocusing set new standards in AF speed.

AUTOMATIC MEASUREMENT

Manual positioning of filar lines is no longer required. IMPRESSIONS™ refined measurement algorithms detect indents even on very poor or scratched surfaces and measure the relevant indent dimensions according to standards. Stay in control by switching to manual measure mode and have the option of adjusting measurements by touching the screen or using the mouse. Filar lines can be colored to give the best contrast against the specimen's surface. To assure that measurements meet relevant standards on symmetry, enable the automatic indent check. All hardness values can be converted to other scales according to ISO 18265, ISO 50150, ASTM E140.

ILLUMINATION SETTINGS

IMPRESSIONS™ software automatic illumination system adapts to the correct illumination regardless of the sample surface quality, wherever on the sample, independent from material (steel, carbide, coated or ceramic). Contrast, Brightness and program, can be set automatically for each measurement or controlled manually. Sharpness can be stored with the pre-determined test.

Too bright

OK

Too dark

Irregular surface

Regular surface

Poor surface

Complex, refined algorithms ensure reproducible measurements on different materials and even on scratched and damaged surfaces.

SUPERIOR ARTIFICIAL INTELLIGENCE (AI)

We include an advanced physics development breakthrough in the image analyses of our Brinell capable hardness testing machines.

The conventional image processing methods on hardness testing machines are fairly successful for clean images that present clear indentation boundaries. In practice, however, workpieces or samples often have rough surfaces that compromise the quality of the image processing which could potentially result in incorrect hardness values.

A human observer can easily find the indentation in both images and the exact boundaries of such indentation (see fig. 1). For a computer algorithm, finding the indentation in the right image is much more challenging due to the many gradients in this image (see fig. 2). Artificial intelligence can overcome this difficulty by training a complex computer neural network to "think" as a human observer.

The INNOVATEST Brinell AI model is trained in our research facility/R&D department using powerful supercomputers. The training phase optimizes millions and millions of weight factors in a neural network, to learn how an indent can look like, using a gradient descent approach. Weight factors have been optimized by a human observer and after optimum weight factors were determined. Using the AI function on our hardness tester to detect new indentations is called "inference" and requires significantly less computing power. The AI model has been created.

The integrated Intel® Core™ i7 processor can easily handle this task which makes it possible to install and use the INNOVATEST Brinell AI module on the NEMESIS 7700G2 as well.

During inference, a new image (a new Brinell indent image) is entered in to the neural network with weights that were determined during training (see fig. 3).

The complex algorithm is capable to calculate a "mask" on its own, this mask is plotted on top of the indent image, exactly filling the indent and marking the edges that then can be easily detected by automatic image recognition system (see fig. 4).

This super advanced technology requires no special objectives and provides even indents with poor visibility, often the case with shallow indents in rough surface materials, to be perfectly detected and measured.

The system is far superior to special objectives and standard Brinell measuring systems.

fig.1-2

fig.3-4

VARIOUS TESTING POSSIBILITIES

The 7700G2 has the option to install a wide variety of anvils, fixtures, flat stages, manual micrometer stages or CNC X-Y motorized stages. In combination with a load application system that ranges from 0.5kgf up to 250kgf the machines can be seen as unique in its class, with a large install base of many thousands of machines.

WORKPIECE CLAMP & INDENTER COVER

The NEXUS 7700G2 can be equipped with a workpiece clamp that provides adjustable pressure on the workpiece surface and presses the workpiece firmly to the stage or anvil. The clamp also protects the indenter against unwanted damage.

TECHNICAL DRAWINGS

TEST FORCE

	Force application	Loadcell Closed loop, force feedback system
	Test forces	0.5kgf – 250kgf
	Test force tolerance	< 0.5%
	Dwell time settings	1 - 999 seconds

SYSTEM

	Electronic system Standard (Recommended)	High performance embedded controller, i7, mSSD 120 GBxx, MS Windows® 11 operated , up to 8 years* INNOVATEST warranty
	Electronic system (Optional)	High performance external controller, i9, mSSD 120 GBxx, MS Windows® 11 operated, 1 year factory warranty
	Screen(s)	27" full colour touchscreen
	Display resolution	0.01 HV, HK, HB
	Statistics	Total test, max, min, average, range, standard deviation, All in real time after each test
	Hardness conversion	Rockwell, Rockwell Superficial, Vickers, Brinell, Knoop, Leeb & Tensile
	Software	No. of tests, Mean, St. Deviation, Min., Max., Range, CP, CPk, individual readings list, storage memory, Dwell time, test force setting, scale selection, calibration etc.
	Data output	XML, CSV, Certified for Q-DAS (Optional)
	Connectivity	4 USB ports, RJ45 Ethernet LAN, W-LAN, RS-232, Bluetooth

GENERAL

	Machine dimension	687mm x 670mm x 1130mm
	Machine weight	190 kg
	Workpiece accommodation	340mm (H) x 205mm (D)
	Power supply	100VAC to 240VAC, 50/60Hz, single phase
	Operating temperature	10°C to 35°C
	Power consumption	100W
	Humidity	10% to 90%, non-condensing
	Noise emission	< 70 db(A)

* Check individual warranty conditions

All dimensions in these drawings are in mm, approximate. Working heights and or workpiece accommodation varies depending on the stages and stage accessories used.

Please contact our sales department for more details.

OTHER MODELS IN THE UNIVERSAL RANGE

VERZUS 750U

Fully automatic, load cell, Closed loop, force feedback universal hardness tester with electronic micrometer or analogue eyepiece. IMPRESSIONS™ 8.5" full color touchscreen.
See brochure B19V750U/XX

FENIX 300U

Load Cell, Closed loop, force feedback, test force application system Universal hardness tester with I-TOUCH™ system.
See brochure B20F300/XX

NEMESIS 5100G2

Multi load cell, Closed loop Fully automatic, 8 position turret Rockwell, Superficial Rockwell, Micro/Macro Vickers, Knoop & Brinell Hardness testers Descending test head, 150 mm fixed work piece position.
See brochure B23N5100G2/XX

NEMESIS 9100G2

Multi load cell, Closed loop Fully automatic, 8 position turret Rockwell, Superficial Rockwell, Micro/Macro Vickers, Knoop & Brinell Hardness testers Descending test head, 300 mm fixed work piece position.
See brochure B23N9100G2/XX

NEXUS 8100G2

Heavy duty fully automatic, load cell, Closed loop, force feedback universal hardness tester with full HD optical zoom stage overview camera, IMPRESSIONS™ 22" full color touchscreen.
See brochure B25N8100G2/XX

NEXUS 8100XL G2

Heavy duty fully automatic, load cell, Closed loop, force feedback universal hardness tester with full HD optical zoom stage overview camera, IMPRESSIONS™ 22" full color touchscreen.
See brochure B25N8100G2/XX

NEMESIS 9600G2

Heavy duty fully automatic, load cell, closed loop, force feedback universal hardness tester with full HD optical zoom stage overview camera, IMPRESSIONS™ 22" full color touchscreen.
See brochure B19N9600G2/XX
